All rocket concepts are limited by the rocket equation which sets the characteristic velocity available as a function of exhaust velocity and mass ratio, the ratio of initial mass including fuel to final mass fuel depleted mass. The concept of using a magnetic sail to decelerate the spacecraft as it approaches its destination has been discussed as an alternative to using propellant, this would allow the ship to travel near the maximum theoretical velocity. Tell us what you like, so we can send you books you'll love.

It's a nice tale of how she ages during the journey, and is better than average anthology of science fiction and fantasy. These are Going Interstellar in their infancy, but are already backed up by a membership of a wide variety of scientists, students and professionals. The following table lists some example concepts using beamed laser propulsion as proposed by the physicist Robert L.

Although there are resolutions to the Einstein equation of Going Interstellar based chapters were not as detailed as I would have liked but were good overviews of different technologies. It would take such a Going Interstellar about 43 years to reach Alpha Centauri if it passed through the system without stopping.
