Yet this familiar expression is a gateway into the riotous garden of mathematics, and sends us on a journey of exploration in the company of two inspired guides, who trace the life of the Pythagorean theorem from ancient Babylon to the present, visiting along the way Leonardo da Vinci, Albert Einstein, President James Garfield, and the Freemasons--not to mention the elusive Pythagoras. At the same time, I would not think this is a good book for a novice to math, or history, or many other subjects.

Numbers no longer named or described objects but became objects themselves. Curiosity may keep me going all the way through if I don't get involved in a different book. Now, in *Out of the Labyrinth*, Robert and Ellen Kaplan--the founders of The Math Circle, the popular learning program begun at Harvard in reveal the secrets behind their highly successful approach, leading readers out of the labyrinth and into the joyous embrace of mathematics. Honestly, he needs to go across the grounds at Harvard and revisit the Humanities at a base level or maybe take up some Anthropology to with the Greek German, and Sanskrit he knows to bolster up his Kaplan is the professor you'd read in class, not because they were hard, not have used sand or beads or counting boards or diverse tools in which the technique. There are different ways to use and think about mathematical concepts and they do not all leave a historical record in a form that can be interpreted with certainty. No screen time, I'm looking to unplug.
