In fact the wet towel method was provided by an old timer in the hobby quite some time ago after I mentioned I was using fans with an open top and he stated that the use of a wet towel greatly increases the efficiency of the fan, especially if it is not viable to leave the top open. If degree tap water is common in your area, I'm sure they've had the question. Unfortunately if this is the sole filter, every time the filter cartridge is thrown out, the majority of the essential Aerobic Autotrophic nitrifying bacteria is thrown away . There are water-change systems on the market that drain the water straight from the tank. For some fish species, a temperature drop of as little as fifteen degrees can be deadly. I do weekly water changes I let the water sit overnight with tap safe before I use it. To them, a sudden influx of cool, fresh water simulates the start of the rainy season. Water changes do not take the place of monthly or bimonthly deep-cleanings of your tank. Thanks for the suggestions.
